

# RM6G1

### **Multi-function AC Motor Vector Control Drive**

The All-In-One solution, RM6G1 Series, with superior control ability and adaptable to various interface and applications will be your best partner to ensure productivity and quality once and for all.

Take action on the support of sustainable environment idea, the strategies of green building design has been integrated to our factory. The final goal is "Zero Carbon Production" for every unit we produce.

### All-inclusive Motor Driving Technology

1. Support four control modes: Open Loop V/F Control, Close Loop V/F Control, Sensor Vector Control, and Seneorless Vector Control. IPM/SPM Motor all available, one drive adapt to whole factory for an easy management.

Surface Permanent Magnet Motor

- 2. Auto-tuning function, including rotational and stationary tuning for each brands of Induction
- 3. Applicable for high-accuracy speed, torque and tension control.
- 4. ODM service for customized electric vehicle motor drive.

Control Mode	V/F Control	Sensorless V/F Control	Vector Control	Sensorless Vec- tor Control *1
Range for speed control	1:40	1:40	1:1500	1:200
Accuracy for speed control	±0.03%	±3%	±0.02%	±0.2%
Speed response	3Hz	3Hz	>50Hz	>10Hz
Start torque	150% / 3Hz	150% / 3Hz	200% / 0rpm	200% / 0.3Hz

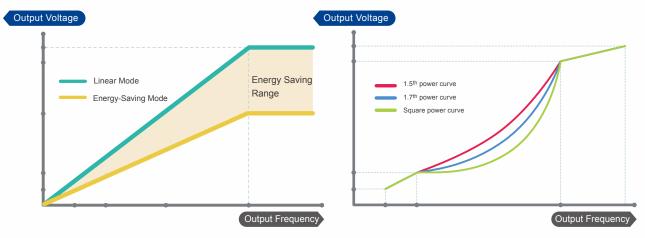

Above performance will be affected by motor type, control diagram and system characteristics. For reference only. Product Introduction 02 \*1: on preparation for mating with PM motor.

## 02 Energy Saving and Cost Effective

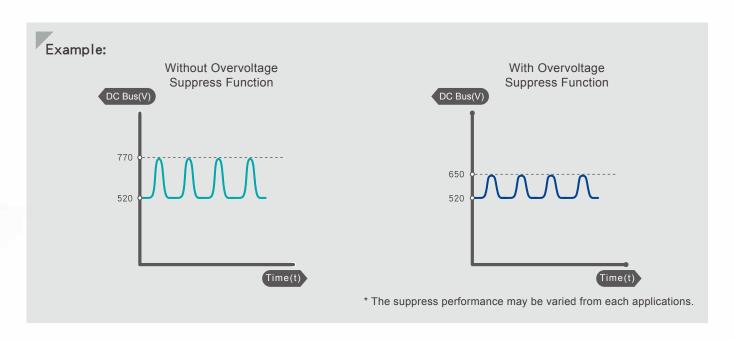

1. Built-in 5 types of V/F curve enhanced the energy saving effect compared to traditional linear V/F control.

Energy-Saving Mode, auto-adjust V/F pattern according to the load condition.

1.5<sup>th</sup>, 1.7<sup>th</sup> and square power curve for variable torque applications.

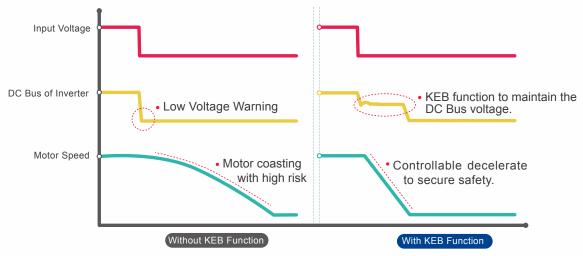

- 2. Match with high efficiency motor for a smaller equipment volume and increasing energy efficiency.
- 3. Overvoltage Suppress Function to lower energy consumption and saving the cost of braking unit. Particularly suitable for pressing or punching machine.

4. Besides using PID control function in the inverter, this function is also able to apply for the other device to lower the equipment cost.

#### Safety Standards and Functions

- 1. All series comply UL, cUL(UL508C, CSA 22.2 NO. 14-05) and CE(EN61800-3, EN61800-5-1) standards.
- 2. All series comply RoHS2.0 and REACH regulations.
- 3. Kinetic Energy Backup (KEB) function, decelerate the motor speed safely when a sudden power blackout occurs and accelerate to previous speed when power resumes.

- 4. Instant monitoring the temperature of inverter and motor for overheat protection and response due by settings. Comply with variety of temperature sensors, PTC/NTC/PT100/RTD392/KTY84.
- 5. Two sets of Safety Disable inputs for coordinated control. Reduce components costs and assure the safety of labors.
- 6.Build-in surge voltage absorber and electric surge absorber to reduce the surge damage to the drive.

#### Easy to Deploy and Maintain

- 1. One touch operation, 60 different kinds of switch selection. (Ex: FWD/REV, Primary/Secondary frequency, 2<sup>nd</sup> motor parameters, 2<sup>nd</sup> PID parameters)
- 2. Build-in two sets of parameter setting for motor. Use single drive to control two different motor for a lower equipment construction costs.

- **3.** 16 sets preset speed to save the time for parameter adjustment.
- **4.** Copying parameter by Keypad for an effortless factory management.
- **5.** 0.5HP~25HP equip with LED Keypad. Full-color LCD Keypad support multi-language and display 8 status at the same time.
- 6. Cooling fan for the model above case-5 can be replaced from the front directly and make the maintenance more convenient.

### 05 Highly Compatible & Adaptable

Heavy Duty-RM6G1 and Normal Duty-RM6P1 for all your needs.
 Overload protection: RM6G1 - 150% of drive rated output current for 1 min.
 RM6P1 - 120% of drive rated output current for 1 min.

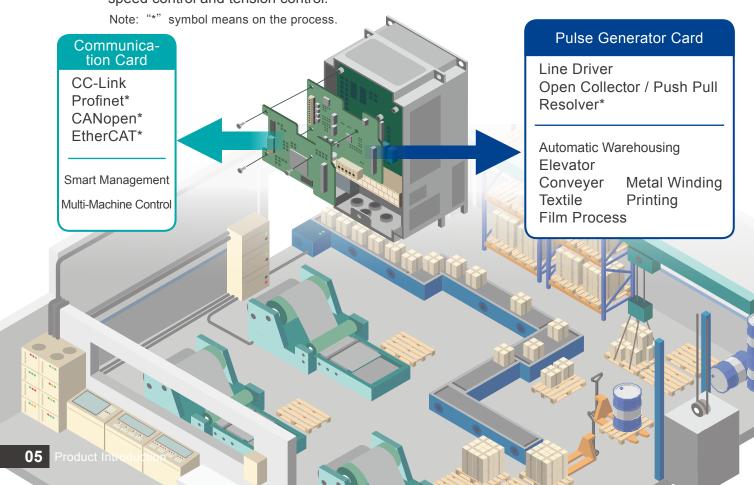

Series	Duty	Motor	Example of Applications
RM6G1	Heavy Duty	11kW	Compressor  Crane  Machining  Extrusion  Winder  Press  Elevator  Textile
RM6P1	Normal Duty	15kW	Pump Fan Blower

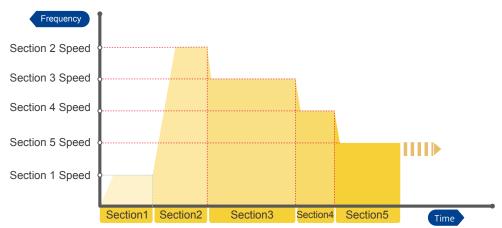

(Note) Please be cautious to the motor rated current that must not exceed the drive rated current.

**2.**Built-in RS-485 Modbus RTU communication for all series and support with additional communication card and pulse generator card to achieve smart management for your factory and make production process more flexible and diversify.

It can also apply to close-loop positioning control, steady-state speed control, high precision speed control and tension control.

- **3.** 8 sets of programmable input terminals, 5 set of programmable inputs and 7 sets of programmable outputs for all the filed you need.
- **4.** Built-in PID control for speed, pressure, flow rate and temperature. Ex: Compressor, pump and Air-Conditioner.
- **5.** Traverse function for textile machine.
- **6.** Built-in 16 sections of operating procedures control by loop, cycle count, direction and timing. Ex: centrifugal dehydration, stir and textile machine.

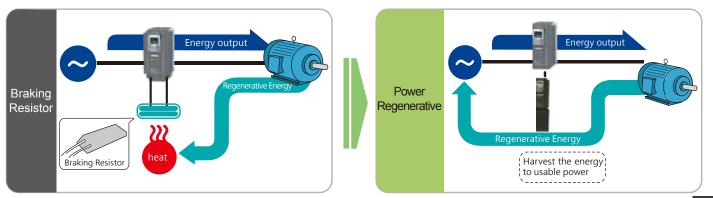

### **06** Factory Smart Management

- **1.** Accumulation for kWh, drive running hours, drive power supplying time and fan operation hours for statistics record and maintenance planning.
- 2. 10 sets of error record, each sets contains 6 status records for abnormal definition.
- **3.** Temperature pre-warning due by setting value for predictive maintenance and minimize equipment idle time.
- **4.** Temperature controlled cooling fan for reducing fan noise and improve life time of fan.
- **5.** Password locks for parameters to prevent alter it by accident.
- **6.** Easily set parameters by PC software.

### 07 Enhanced Energy Saving – Power Regenerative

- **1.** Additional RM6A6 series to harvest regenerative power and saving energy directly. Especially for constant braking condition.
- 2. Free from braking resistor. Eliminate waste heat from it.
- 3. Single RM6A6 module can match with multiple drivers.
- **4.** Adequate for heavy inertia, four-quadrant load, rapidly deceleration and constant braking. Extextile drafting, Plano machining center, elevator, lifting crane, stamping process and automatic warehousing.
- **5.** Automatic operation without interfere original equipment.
- **6.** Standard specification: 200V,  $10 \sim 35kW^*$  400V,  $14 \sim 53kW^*$

## 08 Keypad

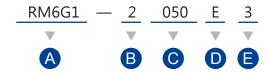

- Ilight on : Primary Frequency Command is set up by Keypad or UP/Down teminal
   Ilight off : Primary Frequency Command is set up by multi-functional teminal
- 2. Back to monitor mode
- 3 Adjust settings and parameters
- Enter the parameter setting mode
   Back to the function setting mode
  - 3. Switch the monitor mode
- 5 Panel Display
- Indicator for Units
- 7 Frequency pot

Drive start key

- Blinking: accelerating / decelerating
  - Light on : constant speed
- Light off: stops
  - Drive stops
     (Cut off the output frequency of teminals)
  - 2. Fault reset

#### 09 Model Number Scheme

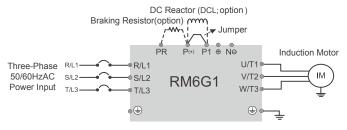

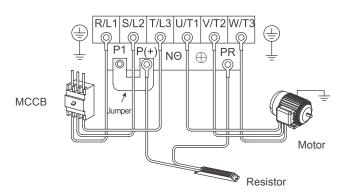

- A ► Product Series RM6G1-Heavy-duty load usage RM6P1-Normal-duty load usage
- B ► Input Voltage 2 : AC 200~240V 4 : AC 380~480V
- C ► Model Number
- Brake Type: B :Built-in braking transistor E :Without braking transistor
- Input Power: 1 :Single-phase 3 :Three-phase

#### Main Circuit Terminals

Symbol	Function	Description
R, S, (L1,L2)	AC power	Single-phase; sinusoidal power source input terminals.
R, S, T (L1, L2, L3)	source input terminals	Three-phase; sinusoidal power source input terminals.
⊕ , N ⊝	DC power source input terminals	External DC power source terminal *Only 20P5~2040,4001~4060 models have ⊕ terminal
U, V, W (T1, T2, T3)	Drive outputs to motor terminals	Output three-phase variable frequency and voltage to motor.
P(+), N ⊝	Dynamic brake unit terminal	The terminals can connect to dynamic braking unit (option).
P(+), PR	External braking resistor terminal	The terminals can connect to external brake resistor(option).
P(+), P1	External reactor terminal	The terminal can connect to DC reactor (DCL) for improving power factor. The default setting is connected by a jumper.
PE 與 ⊕	Grounding terminal	Ground the drive in compliance with the NEC standard or local electrical code.

- ◆ Single phase power connect to R,S terminal
- → Three phase power connect to R,S,T terminal

#### 14 Wiring Diagram & Control Terminals

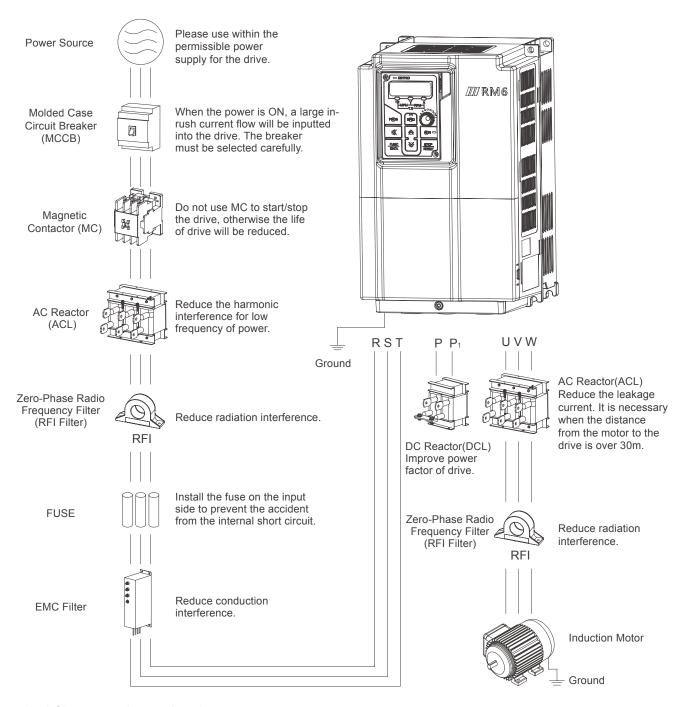

### 15 Communication control terminal

Туре	Symbol	Function	Description
	DX +	MODBUS	With HMI/NB to control RM6G1/RM6P1 series of drive     Communication protected Made and Control RM6G1/RM6P1 series of drive
Communication terminal	DX -	communication terminal	<ul> <li>Communication protocol: Modbus(interface: RS-485)</li> <li>Terminal resistor switch-DSW1; terminal resistor=120 Ω</li> </ul>
	FG	MODBUS communication terminal	Grounding terminal of shielding wire

Note: The total length of connecting cable can not exceed 500 meters.

#### 16 Peripheral equipment of drive

1. ACL appropriate using time

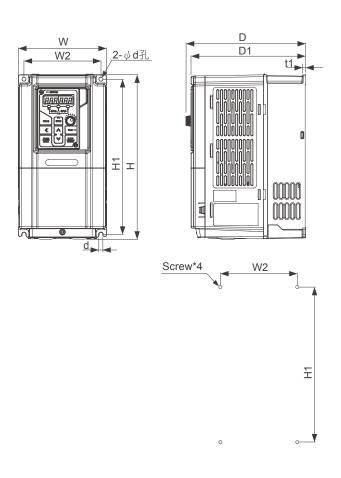

#### RST input side

- When the power capacity is over than 500 kVA or 10 times larger than the rated capacity.
- When the heater (with the SCR), air compressor, high frequency equipment or welding machine
  is installed at the same power source sysem, the harmonic current will interface the drive.
   UVW output side :
- Cable length between the drive and the motor is over than 30 meters or multiple motors are used in parallel
- 2. RM6G1 –ACL is standard equipment when the horse power is over than 100 HP;DCL is standard equipment when the horse power is over than 175 HP
  - RM6P1 –ACL is standard equipment when the horse power is over than 125 HP;DCL is standard equipment when the horse power is over than 200 HP
- 3. Please refer to the manual for details of connection
